EMR and Financial Software for Long Term Care

Who We Are

- 6N Systems, Inc. is based in Wilton, NY

- In business since 2001, 6N Systems has developed clinical and financial software with the latest Microsoft™ technology.

- Our products 6N Financials™ and 6N EMR™ were designed and developed specifically to serve the needs of long term care organizations.

- Our products include a full suite of clinical and management tools to help identify problems, manage documentation and take concrete steps to improve quality processes.
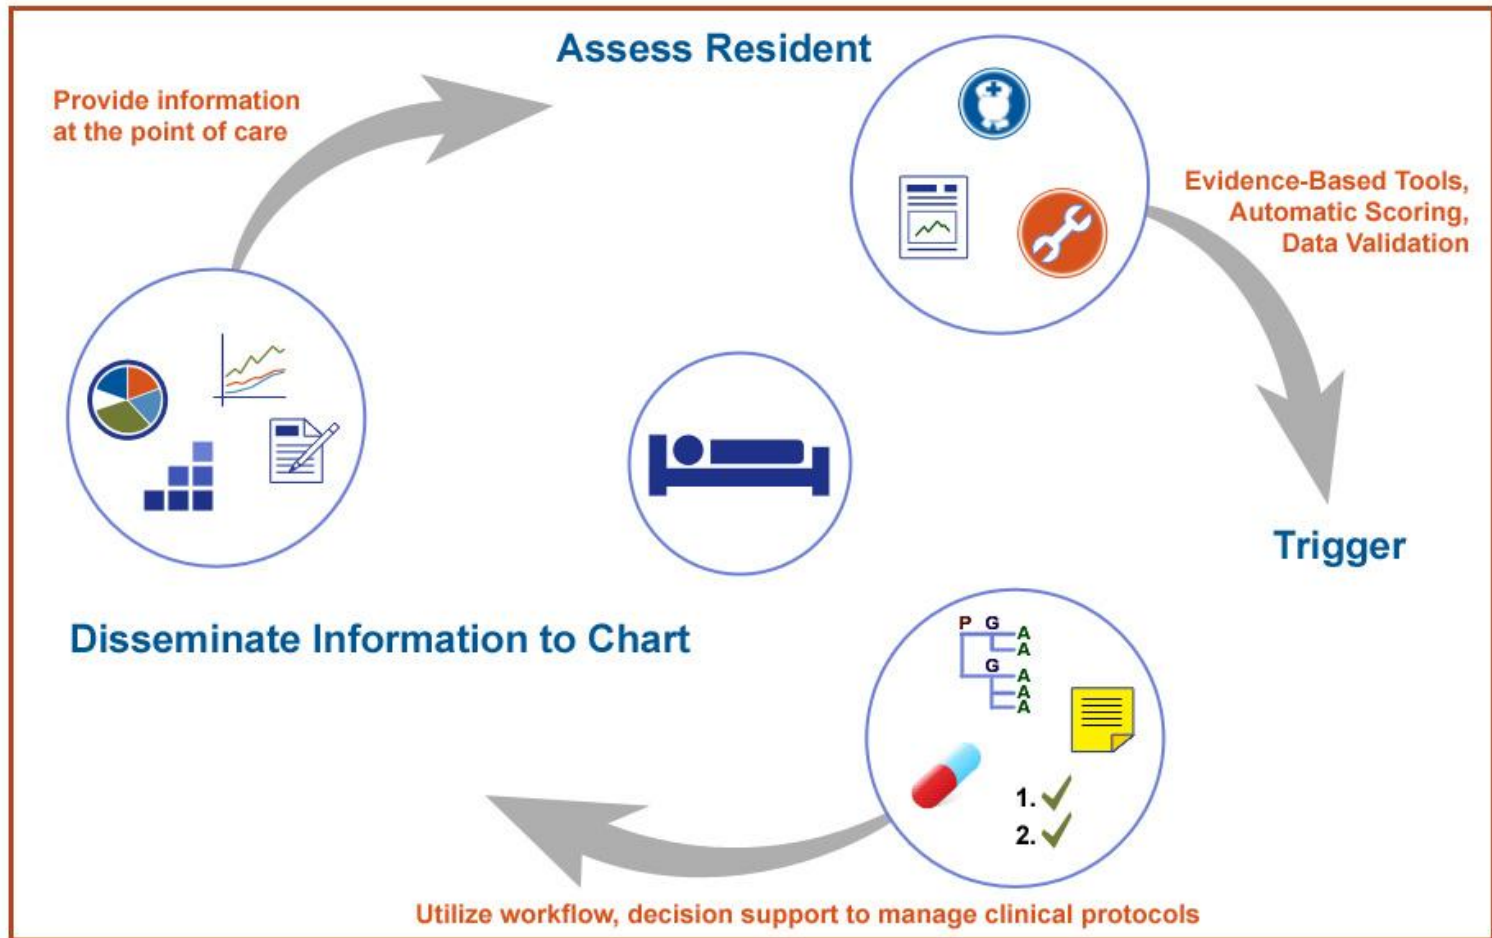

How We're Different

- 6N offers a **single point of entry** for all EMR, clinical and financial information -no need to manage multiple systems.

- Providers have access to cross-facility dashboards, reporting and statistics for improved communication and measurement.

- Our EMR is designed to work with **an organization's requirements.** They drive the reporting, documentation, dashboards and workflow – allowing users to get more out of the valuable information collected.

- We built our EMR to help not only document care, but **improve quality** and centralize resident care- for **all clinicians.**

- Our product is built from the ground up with **Microsoft Technology,** for high performance, ease of use and worry-free updates.

Resident-Centered Documentation

Quality Improvement

To truly gain return on investment and fully benefit from an EMR, an organization must adopt the workflow and decision support technology embedded in the EMR.

Charting Improved Documentation + **Decision Support** + **Workflow** = **Quality Improvement**

Improve completeness of documentation, accuracy of documentation, legibility, use evidence based tools

Compiles and analyzes documentation

Intelligently disseminate information, tasks control process

Improve quality and processes

C.N.A Documentation of meal intake

System identifies risk for skin breakdown based upon nutritional status

Dietary notified - high protein diet/supplement added to prevent skin breakdown

Pressure Ulcer prevention

Get as much out of your EMR as you put into it.
